

Supplementary material to: Draft genome of *Thermomonospora* sp. CIT 1 (Thermomonosporaceae) and *in silico* evidence of its functional role in filter cake biomass deconstruction

Table S3 - Identifications of enzymes with activity on carbohydrate structures present in the draft genome CIT 1 recovered from metagenomic sequencing of filter cake. Predictions were performed with dbCAN online, following for blastp confirmation against the non-redundant NCBI protein database of the occurrence of predicted protein-like sequence deposition.

¹ The name of the enzyme differs between the CAZy databases and non-redundant NCBI proteins.

Table S4 - Identifications of enzymes with activity on carbohydrate structures present in the circular genome of *Thermomonospora curvata* DSM 43183 (Thermomonosporaceae). Predictions were performed with dbCAN online, following for blastp confirmation against the non-redundant NCBI protein database of the occurrence of predicted protein-like sequence deposition.
