

Supplementary Material to “Protective effects of human umbilical cord mesenchymal stem cells-derived small extracellular vesicles on corneal epithelial cells under hyperosmotic stress: Inhibition of oxidative damage and inflammation”

Figure S3 - Representative original Western blot images of small extracellular vesicles (sEVs) isolated from hUC-MSCs. The blots show the expression of sEV markers, including CD9, CD63, and TSG101. Full-length, uncropped images are presented to demonstrate the specificity and quality of the protein detection.
