

Supplementary Material to “*Candida glabrata* species complex in a Brazilian public tertiary hospital: site of infection, identification and antifungal susceptibility profile”

Additional file 3. Comparison of minimum inhibitory concentrations (mg/L) of echinocandins and triazole derivatives determined in 80 *Candida glabrata sensu stricto* clinical isolates (Kruskal-Wallis test for echinocandins and Mann-Whitney U test for triazoles).

Antifungal agent	Median	1 st quartile (Q1)	3 rd quartile (Q3)	Geometric mean
Echinocandins				
Caspofungin	0.03B	0.015	0.03	0.02
Anidulafungin	0.06A	0.03	0.06	0.05
Micafungin	0.03B	0.03	0.03	0.03
<i>p</i> -value	< 0.001			
Triazoles				
Voriconazole	0.50B	0.13	0.50	0.26
Fluconazole	1.00A	0.25	4.00	0.89
<i>p</i> -value	< 0.001			

Different letters indicate statistically significant differences within the same column ($p \leq 0.05$); values followed by the same letter do not differ significantly ($p > 0.05$)
