Influence of migration on the thought process of individuals at ultra-high risk for psychosis - Nogueira AS et al.

**Table S1** Cognitive performance of individuals at ultra-high risk for psychosis with familial migration versus no familial migration

	No familial	Familial	
	migration (n=37)	migration (n=5)	p-value
Word memory	32.1 (3.1)	33.6 (1.1)	0.315
Facial memory	29.5 (4.4)	29.8 (3.8)	0.875
Emotion recognition (angry)	4.3 (1.2)	5.6 (1.9)	0.057
Emotion recognition (fear)	6.5 (1.6)	7.2 (0.8)	0.337
Emotion recognition (happiness)	7.6 (0.7)	7.6 (0.5)	0.834
Emotion recognition (NOE)	5.9 (1.9)	7.4 (0.5)	0.112
Continuous performance (number)	26.5 (5.2)	29.0 (1.2)	0.304
Continuous performance (letter)	24.4 (6.2)	24.6 (5.0)	0.943
Emotion discrimination (angry)	4.7 (1.8)	5.6 (1.1)	0.276
Emotion discrimination (happiness)	7.0 (1.2)	6.8 (0.8)	0.702
Emotion discrimination (fear)	1.1 (0.7)	1.0 (0.7)	0.673
Object learning	14.1 (2.9)	15.8(2.5)	0.252
Abstraction and working memory	33.2 (13.5)	31.4 (8.5)	0.775
Line orientation	8.5 (4.7)	12.4 (5.2)	0.097
