

**Supplementary Material to “Potential paraneoplastic glomerulopathies
in a Brazilian cohort: a retrospective analysis”**

Table S1 - Comparison of the cumulative doses of each immunosuppressant between those who had neoplasm before and after immunosuppression.

Cumulative dose (g)		before ISS	after ISS	p
Corticosteroid	n	12	20	0.716 ^a
	median	3.16	3.11	
	minimum	0.03	0.06	
	maximum	12.49	13.27	
Cyclophosphamide	n	3	15	0.824 ^a
	median	9.20	11.50	
	minimum	9.10	1.09	
	maximum	13.80	27.45	
Cyclosporine	n	-	8	-
	median	-	206.90	
	minimum	-	18.40	
	maximum	-	922.50	
Azathioprine	n	2	7	0.222 ^a
	median	36.60	68.25	
	minimum	18.30	21.20	
	maximum	54.90	355.95	
Mycophenolate	n	2	4	>0.999 ^a
	median	514.44	262.80	
	minimum	65.52	65.88	
	maximum	963.36	525.60	
Rituximab	n	-	2	-
	median	-	1.00	
	minimum	-	1.00	
	maximum	-	1.00	

^aMann-Whitney test; ISS: immunosuppression.
